“Fighting against the plastics which is known as villains to nature”.

Collecting plastic bottles (Photo credit: Shutterstock)

The United Nations and Bangladesh's Decade of Ecosystem Restoration are today inextricably linked for many reasons.. Bangladesh, as a country sensitive to the impacts of climate change, has experienced significant losses of major ecosystems and environmental degradation over the years.. Faced with obstacles such as deforestation, land degradation, river and coastal erosion, natural resources are under enormous pressure

Ecosystems worldwide are affected by the growing environmental problem of plastic pollution. This not only endangers human health but also destroys marine life, degrades soil quality and disrupts underwater ecosystems. Bangladesh has made reducing plastic pollution a major priority because it harms wildlife, the environment, public health even the whole country. To address this problem, the government has established a number of organizations and initiatives. As we can see that plastic pollution reduction is involved with ecosystem restoration. In Bangladesh, the youth people are also come forward to fight against the plastics which is known as “villains to nature”.

Jute products (Photo credit: go8shops.top)

For example, nowadays there's alternative way of using a plastic products. Jute products are widely available and can be used as a substitute for plastic. Here are some illustrations: Jute shopping bags are a popular and eco- friendly alternative to plastic bags. They are recyclable and biodegradable. Jute can also be spun into twine or sheets to be used to secure and bundle items. Jute fibers can be spun into yarn and woven into fabric. Jute fabric has a rustic, natural charm and can be used for carpets, upholstery, clothing and home decor. Jute's adaptability makes it a good alternative to plastic in many cases, allowing individuals and businesses to make more environmentally friendly decisions.

Eco-friendly plates made of dry betel nut tree leaves (Photo credit: The Times of India)

In Tangail, there's a shop named 'Eco Bazaar' manufactures eco-friendly plates and glasses which are made of dry betel leaves. And the prices of these products are reasonable. Most

interesting part is that the young students are working in this shop to prevent plastic pollution. They are hoping that people of our country should avoid using plastics and use eco-friendly products to save the environment. Government should strictly ban plastic products.

Lastly, We can minimize the negative impact of plastic pollution on the ecosystem by addressing it and implementing sustainable measures such as recycling, waste management and using alternative materials. This will support ecosystem restoration goals by ensuring sustainable use of natural resources, maintaining biodiversity and promoting ecological health. We need to fight on this plastic pollution reduction. Only we can save our country and nature from this villain called ‘plastic’.
